EDUCATION

Visvesvaraya Technological University

BE in Computer Science and Engineering

June 2024

CGPA: 8.9/10.0

SKILLS

Languages: Python, Go, Dart, Kotlin, C++, Java

Frameworks and Tools: Flutter, Django, FastAPI, Flask, MySQL, MongoDB, DynamoDB, PostgreSQL, Dialogflow
Google, Firebase, N8N, Docker, Redis, RabbitMQ, GitHub/Bitbucket, Git, JIRA, AWS, OCI, GCP, Emergent

EXPERIENCE

Convin.ai | *SDE-1*

Aug 2024 - Feb 2026

- Enhanced Convin's voicebot through telephony, STT, and TTS integrations, implementing interruption handling and audio chunking to reduce latency by 30% and improved conversational stability and speech naturalness.
- Engineered a high-throughput multi-tenant micro-service in Go for client activity logging, leveraging DynamoDB and ScyllaDB with write batching, handling over 1M+ writes/day and delivering consistent sub-100ms read response times, significantly boosting software maintainability, tracking capabilities, and data accuracy.
- Optimized Convin's reporting, reducing memory usage by 93% through efficient queries, chunking, and Dask DataFrames. Leveraged Parquet storage for efficient disk-based processing and minimal memory load.

Greendzine Technologies | *Product Developer Intern*

May 2024 - July 2024

- Integrated foreground services for seamless Bluetooth data transfer between the app and electric vehicle, leading to a 30% increase in data consistency and a 20% reduction in battery consumption, significantly boosting user satisfaction and app reliability by minimizing data interruptions.
- Orchestrated a speech-to-text functionality, enabling hands-free voice commands for vehicle operations, which resulted in a 40% increase in user accessibility and a notable improvement in driver engagement, making the app more user-friendly and convenient.
- Migrated web app functionality to Kotlin-based mobile app, enhancing accessibility and driving a 25% increase in adoption.

Zintlr | *Software Development Engineer Intern*

Jan 2023 - Mar 2023

- Collaborated with a team of developers and developed a language-learning chat application.
- Implemented and optimized chat message flow, enabling seamless communication between users; reduced response time by 50% and increased customer satisfaction by 25%
- Utilized the DALL-E API to enable users to convert text messages to images; improving user engagement and experience.

PROJECTS

Notelytix | *Go* | **Meeting Intelligence Platform Link**

- Engineered a privacy-first meeting assistant with real-time STT and LLM insights, reducing data-exposure risk for enterprise users and accelerating post-meeting knowledge retrieval by 30–40%.
- Designed high-concurrency duplex streaming and fault-tolerant reconnection flows, sustaining 50–100 parallel sessions in testing with less than 250ms latency overhead and minimal transcription loss events.

SalesSense | *Django* | **Sales and Marketing AI Assistant Link**

- Developed the SalesSense AI assistant in Django, showcasing its ability to enhance sales strategies with personalized communication, tailored insights, and data-driven recommendations.
- Implemented advanced features like multithreading, Celery task distribution, message queues, and asynchronous processing, leading to a 35% reduction in sales team effort while ensuring responsiveness under high load, enabling the team to focus on higher-value tasks.
