PROFILE

UNSW Master of Information Technology student and software engineer building at the intersection of AI, product, and scalable systems. Brings production experience across conversational AI, distributed backend platforms, and user-facing applications, with a track record of turning technical challenges into measurable improvements in performance, reliability, and adoption. Combines hands-on engineering depth with product-oriented problem solving and experience working across technical and user-facing contexts.

EDUCATION

University of New South Wales (UNSW Sydney)

Sep 2026 – Present

Master of Information Technology

Visvesvaraya Technological University

Jan 2021 - Jun 2024

BE in Computer Science and Engineering

CGPA: 8.9/10.0

EXPERIENCE

Convin.ai | *SDE-1*

Aug 2024 - Feb 2026

- Enhanced Convin's voicebot through telephony, STT, and TTS integrations, implementing interruption handling and audio chunking to cut latency by 30% and improved conversational stability and speech naturalness.
- Engineered a high-throughput multi-tenant micro-service in Go for client activity logging, leveraging DynamoDB and ScyllaDB with write batching, handling over 1M+ writes/day and delivering consistent sub - 100ms read times.
- Optimized Convin's reporting, reducing memory usage by 93% through efficient queries, chunking, and Dask data frames. Leveraged Parquet storage for efficient disk-based processing and minimal memory load.

Greendzine Technologies | *Product Developer Intern*

May 2024 - Jul 2024

- Integrated foreground services for seamless Bluetooth data transfer between the app and electric vehicle, leading to a 30% increase in data consistency and a 20% reduction in battery consumption.
- Orchestrated a speech-to-text functionality, enabling hands-free voice commands for vehicle operations, which resulted in a 40% increase in user accessibility.
- Migrated web app functionality to Kotlin-based mobile app, driving a 25% increase in adoption.

Zintlr | *Software Development Engineer Intern*

Jan 2023 - Mar 2023

- Collaborated with a team of developers and developed a language-learning chat application.
- Executed and optimized chat message flow, facilitating seamless communication between users; cut down response time by 50% and increased customer satisfaction by 25%.
- Utilized the DALL-E API to enable users to convert text messages to images; improving user engagement and experience.

PROJECTS

Notelytix | *Go* | **Meeting Intelligence Platform Link**

- Engineered a privacy-first meeting assistant with real-time STT and LLM insights, reducing data-exposure risk for enterprise users and accelerating post-meeting knowledge retrieval by 30–40%.
- Designed high-concurrency duplex streaming and fault-tolerant reconnection flows, sustaining 50–100 parallel sessions in testing with less than 250ms latency overhead and minimal transcription loss events.

SalesSense | *Django* | **Sales and Marketing AI Assistant Link**

- Developed the SalesSense AI assistant in Django, showcasing its ability to enhance sales strategies with personalized communication, tailored insights, and data-driven recommendations.
- Implemented multithreading, Celery task distribution, message queues, and asynchronous processing, reducing sales-team effort by 35% under high workloads.

VOLUNTEERING

Check Point, Arc @ UNSW | *General Volunteer*

Sep 2026 - Present

- Welcomed students at Brekkie Club activations by setting up the stall, serving breakfast, and engaging with students

to promote emotional, mental, nutritional, and overall wellbeing.

Arc Insiders, Arc @ UNSW | *General Volunteer*

Sep 2026 - Present

- Engaged with 70+ students during campus activations, answered questions about university events and programs, and connected students with relevant activities and opportunities.

Abhikalpana NGO, India | *Volunteer*

Sep 2021 - May 2024

- Managed medical camp operations for underprivileged children by coordinating arrivals, guiding children to designated areas, and organising seating and waiting arrangements.
- Empowered underprivileged children through education by teaching various subjects and academic skills.
- Promoted physical well-being and teamwork among the children by planning and leading engaging games and physical activities.

TECHNICAL SKILLS

AI & Data: Generative AI, LLM applications, RAG, LlamaIndex, LangChain, Speech-to-Text, Text-to-Speech

Backend & Systems: Go, Python, Django, FastAPI, REST APIs, Microservices, RabbitMQ, Redis, Celery

Databases & Cloud: PostgreSQL, MySQL, MongoDB, DynamoDB, ScyllaDB, AWS, GCP, OCI, Docker

Application Development: Kotlin, Android, Flutter, Dart, Firebase

Languages: Python, Go, Kotlin, Dart, C++, Java, C

Engineering Tools: Git, GitHub, Bitbucket, Jira
